

Spyros Lalechos, is a Ph.D. Geophysicist and Head of the Department of Seismotectonics of Earthquake Planning & Protection Organisation (E.P.P.O.). He studied in France (University of Paris-7 and Paris-11 Orsay) and specialised in the study of active faults. Since 1997, he participated in numerous of microseismicity surveys and active faults studies within areas of Greece with intense seismic activity. He also participated in research groups on seismic faults behaviour after the 1999 strong earthquakes both in Greece and Turkey. His work is now turns towards the mapping of active faults of Greece in a GIS environment as well as their seismic hazard potential evaluation. He was head of a European co-financed project “Establishment of the Greek Accelerometric Network” that led to the development of the “Gis Hellenic Accelerograms Database - GHEAD” (<http://195.251.49.25/map/>).
